CS PRO SYSTEMS TESTIMONIALS

I have never liked or used "Testimonials", in the past, for a couple of reasons. First, when I look at the "Ts" on other sites, they look like they were all written by the same person over a weekend. Second, I was afraid that if I put some up, they would be "copied" and used on other sites to sell junk. Lately I have been getting allot of pressure from my customers (sending others to visit) to put some up on my site. So OK already.

Actually, the vast majority of testimonials I receive are "call-ins" since I encourage my customers to stay in touch and provide me with direct feedback. I get these at the rate of about ten or so a week. I don't document them - just "mentally" file the situation, application, and results for future reference - "Will CS work for.....?"

I decided that, instead of the typical short "ambiguous clips" I usually see on other sites, I would paste entire (or at least the pertinent portions of) actual posts. The reason is again twofold. They are pretty much "personalized", hopefully making them unusable by others (or at least recognizable). Plus, many contain very useful information about how people are using our products. These are only some of the e-mails. I have several more "mail-in Ts" in a file cabinet which I will be transposing to the list, as time permits.

One of the biggest problems I encounter is that, many times when seriously ill people are getting near well, and have a 'system' producing something that is working for them, I lose touch with them! They are too busy getting better, doing things they never thought they would ever be able to do again, and trying to forget the "emptiness" they had previously resigned themselves to. I get lots of feedback relative to the common - ordinary - day to day illnesses, but the really serious illnesses are the problem. They stay in touch while going through the early stages, trying, experiencing, anxious, and finally finding that CS is really working. But once they are certain and assured they are on the way, they are off to "spread their wings". I can't blame them, but it is totally frustrating, and it makes it difficult to offer "complete" information to others suffering the same maladies.

Even later, when they call in to reorder electrodes, etc., they will tell me their situation over the phone. I always ask them to take a few minutes to put in an email so I can post it for all to see. Their answer is always "sure", "no problem", "I will start it right away", and the result is always the same. I have been waiting years for these emails. So when it comes to the serious problems, I can often enlighten people - to a point - but I cannot (honestly) provide them with a successful conclusion in writing - only a conversational repeat, or a supposition based on experience.

I hope you find the following useful. And if you have any "Will CS work for.....?" questions, give me a call at: 210-626-2546, to access my ten+ years of accumulated "mental files", my opinion (based on the problem), my experience, and knowledge, which I share freely. I will not tell you what to do, or suggest anything, but I can tell you what others have done before, and explain that the decision is yours, and yours alone.

Note: I will not resopnd to "extensively inquisitive emails". I am very busy, the worlds worst typist, and these responses simply take too much time. If you have more than one simple question, please CALL me! I will be happy to help you any way I can.

Dr. Bruce Marx.

IN NO PARTICULAR ORDER

This was recently sent to an associate of mine:

Thanks Russ for the info on using CS in a nebuliser. Just a progress report on my daughter who has Cystic Fibrosis. She started on CS 3 months ago (message 2792) After a few weeks she gradually discontinued all her antibiotics. She's had one checkup at hospital outpatients clinic and her breathing test had improved. She has regained her appetite, put on weight, and her energy is increasing. She has just finished a three week stint performing in Les Miserables as Fantine. CS came to our notice just in time....she was seriously ill and looked it. Thank you, Universe!

Bruce...

I'm just making up 6 jugs (50 ounce) of CS ... and, was just appreciating what a fine job you did in designing and refining my CS Machine !

Thanks Bruce
P. C.
10-30-00

P.S. I have never made a penny off of it ... but, ever once in a while just love firing it up and watching it do it's thing !!

Hello,

I have written very few of these, and the reason is that I find few items, articles, etc. to compliment openly that has done what this silver

has done. I am 48 years of age, male, 6" 71/2" tall and weight is about 575 lbs. A friend of mine told me about this "Wonder

Water" some

time back. I had ulcers on both of my legs, and have had them since January, 1998. I have been going to doctors since then once a week, and they have done everything to me I think known to man trying to heal my legs. I am not diabetic, so that thought can leave you.

My thyroid has been tested, O.K., just as everything else has been tested, examined, poked, prodded, and played with (in the doctor sort

of way). My blood pressure is fairly constant 100/60 and my pulse is normal. I tell you this because of my size, and these are the same

answers I have to give someone when I try to tell them about the silver and what it did for me. The doctors could not get my legs healed.

Like I said, my friend turned me on to this silver water, and I decided to give it a try. I am letting you know, this healed my legs. I also did

something else for me. Last winter, my wife, daughter and two grandchildren were extremely ill with the flu virus. I was around them

constantly. Not once did I even feel like I was going to catch the virus. We make our own silver using one of your generators.

My friend

makes it 15-18 PPM, and I consume probably 2-3 bottles (16 oz) per week. Anyone that reads this, and has any questions may contact

me at daniel@southeastagnet.com

and I will be happy to answer them. Anyone that thinks this silver water is a fluke, keep thinking that, and I will keep drinking it. You get

sick, and I'll stay well. I swear by this water, and live by this water. My friend can tell any of you that I swear by it. I keep him busy

making it for me.

Daniel L. Cooper

Arcadia, FL

Hello, again, my friend:

Thanks for your kind response. I understand...

How sad that such a good thing -ignored by those who should most know about it and use it- should have such enemies...!!! You know, I recently entered the website of a Vit. store and, seeing CS there, I went to the item... so expensive, and extolled as high quality by virtue of it's 'deep golden color'. Right there, I knew what type it was.

Also, I guess I never mentioned it to you, but in light of having seen your report on Mx. and the use of the respiratory machine with CS, my youngest daughter, now 31, who's suffered asthma over the years, followed the example, and in 5 minutes was totally alleviated from the onset of an attack, as well as the chest tightness gone. Later, the lady pharmacist who gets 'silver fortified water' from me has done the same with her elderly mother, who was gravely ill from bacteria contamination within a hospital (had to stay there over 50 days!), with remarkable results. She just told me that she's recovered better than 90%!

BTW... I don't believe I told you that about 3 months ago, my yearly blood tests showed my PSA had risen from a .04 to almost 5.0! I had, quite honestly, been very careless in specific areas of health/nutrition care that over the previous years I had followed quite strictly. I asked the doc for 8 weeks B 4 being referred to a urologist, in order to get back on my 'regime' and to use my new "zapper" as per Dr. H. Clark. At 8 weeks, I had my next blood test... PSA was down to 1.9. I do continue, regularly, all that I was doing, so I'm hopeful that the next test will be even lower. CS is, also, part of my daily intake... I take 4-6 oz

a day, sometimes more. I also have it in a nasal spray bottle. Since starting to use CS about 2 years ago, I've not had a cold, virus inf., etc., ever take hold... try to start up, yes, but always defeated within the next 30 min. or less. I praise God for having made silver for the good of our bodies! I also put 6oz+ daily in my dog's water (a beautiful, big Dalmatian). He's never had the first sign of cold or infection for his 1 1/2 yrs.!

Once again, thanks for your answer. Take care. I hope all works out well in all the matters you mentioned and which are familiar to us.

Cordially yours,

Dave S.

(I normally would not include my response, but this particular one "states our position about legality" and explains the status of our "Donation Program".

Hi Bruce,

I haven't written or spoken to you in a long time. I will try to keep this short

I think I told you that when I bought the HVAC Ultra Pro from you, and the water distiller and meter, I was setting up to provide CS at my cost for production for our church food co-op (I have been a full time pastor for 31 years, and I have pastored this congregation for almost 26 years... We go by the name Church of God Bible Study Center, Inc. but are non-denominational... We are primarily a foreign mission (ary) training center).

Anyway, to keep a long story short.... I don't know if you heard about the flooding that killed at least 50,000 people in Venezuela last winter (Red Cross estimated over 100,000), but we had several families from our congregation working down there as

self-supporting missionaries (they live in tents) at the time. Fortunately, they were all okay, but when that tragedy occurred, they sent a request for more families to move down and help.

It turned out that most of the families in our congregation decided to go, and about 140 people moved down there to help out. My wife and I go down for awhile, and then come back here for awhile, trying to keep things going in both places. Currently I am here in the states, but we leave on Sept. 30th to go back down for 2 1/2 months. We will be back here Dec. 16th.

I wanted you to know that during the problems last winter, the CS produced by your machine was a great help. I sent as much down as we could squeeze in with different people who were flying down, and we took some on our trips also.

I need to produce as much as possible. We do not charge for ANYTHING down there. The local GN (National Guard) even 'borrows' our generator whenever they have a power outage (they just come and get it (:^)) It is a strange culture compared to here in the U.S. People will steal anything they can get their hands on, so we have to keep watch over the equipment around the clock. Almost everyone lives in canvas tents, which are easy to get in to, and our equipment is stored in a large tent (guarded) also.

We can't really blame them.... Right now they have nearly 50% unemployment, and even those that work..... most of them make less than \$50 U.S. a week. As far as pricing, most things are at least as high priced as they are here.

Whenever anything works to 'cure', they are almost like the ancient indians in that they all spread the word and first thing you know, there are multitudes of them gathering wanting help also.

Really they are sweet natured people for the most part.... They just grew up learning to steal and such.

I have kept the Ultra Pro on this end so far as it is easier to get good water up here.
Loren

Dr. Bruce

About a week ago, I noticed some turkey-ham slices sitting in the package next to our sink, and being very hungry, ate several of them. My wife was gone to the store, so I couldn't inquire about them. They seemed still cool, so I assumed that she took them out of the refrigerator to thaw just before she left for the store.

I noticed they were rather 'tangy', but being turkey 'ham', I figured it was the 'flavoring' that they used to make them.

After eating a couple of slices, my daughter came in and informed me that the ham had been left over from a picnic a couple of weeks before, and that it was spoiled. It had been left sitting out to remind them to package it up before putting it in the garbage (as it would draw a lot of flies).

Approximately 20 minutes or so later, I was nearly doubled over with stomach cramps. It was quite severe, and so I immediately headed for the room where I keep our CS Ultra Pro working nearly around the clock (which it has been doing now for about four years or thereabouts with no problems).

I had a batch that had just finished about an hour earlier, so I poured myself a 16 ounce jar full, and drank it immediately.

I can honestly say that within a few minutes, the cramps had let up a lot, and within a half-hour there was no sign whatsoever that I had even started becoming very sick at my stomach just a short while earlier.

Skeptics might say 'coincidence'. However, a few years ago I had a similar experience in a restaurant. That time I had no colloidal silver to drink, and that experience of food poisoning left me with vomiting, upset stomach, and severe headaches for two days afterwards.

I truly believe the CS rescued me in this incident, just as it has in several other instances of sickness in the past!

L. A.

Dear Dr. Bruce:

I was just wondering if there have been or are any studies being done now on CS and parasites, Giardia in particular, regarding how much CS you would need to take and for how long? Your CS continues to be a tremendous help to me and has improved my intestinal condition immensely.

Thanks so much.

D.

CS PRO (attn: Bruce)

I setup the HVAC Ultra PRO (which, by the way, is a very well made piece of equipment) and ran a couple of batches of silver and it worked just as described in the operations manual and all went extremely well. Your instructions for setup were very clear and very detailed as far as what conditions one might encounter during operation. Being an analytical type I really appreciate the details.

The only difficulty I encountered while reading the operation manual (before I observed the first batch) was, I had a hard time visualizing what you meant by "pulling a cone". Perhaps a picture, similar to the one attached, in your manuals would be useful to future customers. The attached image of the HVAC Ultra PRO using store-bought steam distilled, ozonated (0.2 ppm TDS) water about 5 minutes into the process. ([to see the picture - click here](#) - not included for brevity - Dr. Marx).

Many thanks to you and your crew making such a unique and quality product!

Sincerely,
N. L.

p.s. Did you get the several issues of The SPECTRUM newspaper we sent to you? (**EXCELLENT** - [Recommended reading](#) - Dr. Bruce)

Hi Bruce, bought some water on the way home yesterday. Set everything up and pulled 1/2" cones. That's with the arc bars as close but not in the water. They went to 1/4" size after 90 min. At 8 min. left, one cone dropped off. At 2 hrs, it shut off and then I bottled it. Easy as pie (actually pie is a lot harder):>>
Nice product...another satisfied customer.
Mike

I have been using CS mainly for topical applications and when colds come on. My youngest son's eczema flares up during the winter and CS has been the only thing that really works. We have tried different ointments and creams but nothing eliminated the rash like CS did. Also, both my sons had some accidents that resulted in cuts on their chins that needed stitches. We butterflyed the skin and applied CS a couple times a day and have seen remarkable results.

I had originally used CS from a health food store, which cost \$20 for a four ounce bottle. I then discovered Bruce's CS, which costs \$20 including shipping, for a sixteen ounce bottle. It is a higher quality, no yellow tint, and lasts longer. When we have used the CS with our kids during bouts with colds, they seem to not last as long and to be less severe. The bottle we now have is several months old with no discernable change in appearance or effectiveness.

Dear Bruce,
Thanks for promptly sending out my last order, I greatly appreciate your not charging me any shipping. I am once again requesting another two bottles. You can charge my credit card as before.
It looks like my daughter is just about over her candida infection. Most of her overt symptoms are gone. I am slowly reducing her CS dosage but am

keeping her on a maintenance for a while as I add foods back to her diet. While your CS systems are the rolls royces of the manufacturing of CS, their price is still just out of my reach. I thought maybe I could start making my own CS and purchased a Robey system with a 30 day trial period. Upon trying it out I set the dial the 10PPM's and watched as it worked for 30 minutes producing a signficiant wafting off of silver from the electrode and left both electrodes black with black particles floating in the water, this looked to me more like a 80PPM production which is not what I set the dial to so back into the box it went and I am returning it for a refund.

In the mean time I like your product the best and maybe this Christmas Santa will come through for me but until such time I will continue to purchase your CS as it has really done it's job.

Thanks.

Nancy J

I became interested in CS a little over a year ago. I wasn't really interested in buying or building any particular machine until I knew more about it. What I really wanted to do was TRY IT.

I learned that CSPRO would deliver a 16 oz. bottle of CS to me for \$20.00 so that is what I did. I actually ordered several bottles and was delighted when it cleared up a bad infection in my mother's foot that six trips to the doctor and a ten-day antibiotic treatment couldn't get rid of.

There may be other makers of CS that have products as good as CSPRO but that was the stuff we used and it worked astonishingly well. So I purchased one of their machines and have been making CS for a year this month.

Am satisfied with the CS, the machine and with the way I was treated by Bruce Marx.

Obligatory disclaimer: I'm not in any way involved in their business, am not a relative of Mr. Marx, in fact I've never even met the gentleman. I am just a very satisfied customer.

Hi doc.!

> Its a pleasure to write! and to let you guys know that my father is doing much better with his cancer using the CS you gave me while here. The reason

> for this letter is to ask you guys about the small machines to make the COLLOIDAL SILVER, and how can it be shipped to Roatan, Honduras???

> if this can help,plaes doc i beg you to help us....

> p.s. captain george always ask for

> you,he says hello.

Cyprus

dear bruce,

tank arrived on the 9.11.99, thank you. we have set up tank with a 10000 v transformer and an ammeter in series. we are amazed with your design for drawing up the water in cones! congratulations.

the es produced by your euro tank produces a much more consistent beam of tyndal particles than our arrangement of having the electrodes in the water, with no drawing of water cones.

many thanks and congratulations for your ingenuity.

best regards

From the book, "**How to Beat Multiple Sclerosis**", by Nadine A. Wooley:
An addendum inside the front cover titled

"Late Breaking News":

After this book had already left for the printers, the author received news which needs to be shared with her readers.

1. Nadine Wooley had used the HVAC silverwater described in her chapter "A Cure for MS?" for eight months when she was given a MRI in mid-December. The MRI revealed that two of the plaques (or lesions) on her brain were gone. The plaques had been in evidence in every one of Nadine's MRIs (five in all), taken since 1988.

2. Nadine no longer uses her cane.

3. She has not had a UTI (a bladder infection) since taking the silver water.

4. Seven months after first taking silver water, Nadine had a silver toxicity blood test done by the Mayo Clinic. The results revealed no silver toxicity. In fact, silver levels showed slightly less than average in her blood.

5. The silver water manufacturer mentioned in this book, has moved to Israel. For more information on obtaining HVAC silver water, check the website www.smithsilverwater.com or call 503-228-7045.

6. On page 80, the word watt should read volt.

A Note from Dr. Bruce - the person who was providing the HVAC silver water was Ray Churba of Portland OR, who was running our UltraPros. As I understand it, on leaving for Israel, he sold one of his systems to Les Smith, who continued making the silver water for Nadine. With the release of Nadine's book, they have been inundated with requests for silver water and have recently purchased two additional UltraPro systems to keep up with demand. Congratulations!

PS - Ray is back and has another UltraPro.

I highly recommend anyone with an interest in CS, and MS, to get Nadine's book "How to Beat Multiple sclerosis**" (and the things your doctor didn't tell you), by Nadine A. Wooley! The ISBN # is: 0-9626697-5-X. Excellent information about the power of CS, and provides hope for people suffering from MS! You can contact Nadine at nzadine@msupbeat.com or visit her site at: www.msupbeat.com**

Hi,

I have used your products and today (3/6) a message on treating CFS with colliodal silver hit the CFS Experimental treatment Email list. I am forwarding you a copy. I sent an Email to the list stating that I have used your products and I am happy with them. I am forwarding my email to you.

I am advising you of this because you may get a lot of phone calls in the next week.

M. L. H.

Bruce,

I just received my Ultra-Pro last week and am well on the way to working with it in quantities that I could not previously afford. I am a registered nurse in Canada. Although I can not use CS in my practice because of the 'medical modle' I can certainly use it at home and with friends and acquaintences.

I. R.

Hi:

I gave a bottle of my 20-24 ppm to a friend to try out. He had had itchy spots on the top of his head for years. All treatments had failed. Within 20 minutes of applying CS with a q-tip the itching stopped. His wife has a skin problem in an undetermined location - has had numerous prescriptions over the years to no avail. My friend asked her to try it and she balked. She asked him if it was any good and he replied by asking 'when was the last time you saw me scratching my head?'. She tried it. Within 30 minutes her discomfort had gone. They are eternally grateful.

I. R.

I had written earlier about getting over some congestion when using a nebulizer once a day for a couple days. Someone else had suggested staying on the nebulizer for two weeks due to the possibility of not getting completely rid of the "bug." Well, I am back on the nebulizer for the last two days and have had similar congestion from something picked up at the office. So much for the short stint. Needless to say, once I take CS in the nebulizer at night, I feel much better the next morning. I just need to keep on it longer.

We ended up taking our oldest son, who is five, to the doctor only to find out he had an ear infection. Not being too familiar with the symptoms of ear infections, we were just treating orally with 1/2 tsp. per day and 1/2 tsp. through the nebulizer, as opposed to placing a drop or two in the ear.

Our youngest son, who is three, did not need to go to the doctor as his symptoms cleared in a couple days.

Our daughter, fourteen months, has had some congestion. We've been giving her CS orally once a day, about 1/4 tsp. She is starting to feel better after four days.

I have not been taking a regular dose of CS, only when colds or flu symptoms come along, but this is what we've experienced. Oh, the CS is Bruce's 10-12 ppm.

By the way, we're starting to make a dent in the number of people getting ripped off by health food stores charging \$20 for 2 oz. We've gotten several people to switch to the HVAC CS. They seem hesitant at first because we give them four ounces to try at no charge. I guess they think the stuff can't work because it's so comparatively cheap. Anyway, after a day or so they're calling back for the phone number, or wanting me to place an order for them. Bruce, you really are doing a great job!

Mike

All of the above is to get to this point: the time I started nebulizing was the time I stopped this bug dead in its tracks. I kept it up for several days even though I felt great, as long as sputum production was significant. From now on I will immediately nebulize at onset of infection. I believe the next step beyond having the right stuff is the right way to deliver it. For respiratory infections, oral dosing of CS at any amount or concentration may not be enough. Bruce, why not carry a few nebulizers in your shop, round out the total CS package?

By the way, we have used our AC silver to successfully treat pink eye, scabies, psoriasis, upper respiratory infections, spider bites, vaginal infections, urinary tract infections, shingles, canker sores, acne, fever blisters, 2nd and 3rd degree facial burns (which did not scar) and athlete's foot. Probably the only reason our list is so small is because we (family and friends) haven't experienced anything else so far. I have not had an upper respiratory infection that lasted longer than two days since I made

my first batch of your silver in Nov. of 1997. Prior to that I had one that lasted 4 months; I was x-rayed to rule out pneumonia, had a PPD to rule out TB and generally shunned by my co-workers, who didn't want whatever I had. Now I breeze through cold and flu season with my C silver. That is a great benefit for a nurse.

Hello, Bruce

We have been using CS produced with the HVAC Ultra we received from you last spring here in Tucson and have seen terrific results, both with ourselves and others who have used it. Some of our friends and acquaintances have even had skin cancers disappear in a few weeks, whereas months of conventional medical treatment given by dermatologists right up to the time they took CS had not worked. In fact, one person already had an appointment scheduled with their dermatologist before she started using CS, and the dermatologist was amazed at the dramatic reduction in the size of the skin cancer. In a few weeks, it had shrunk from the diameter of a quarter, with a height of about an eighth of an inch, to less than the diameter of a pencil, and was flush with the skin.

NOTE: This was about a young lady who was hospitalized (paralyzed & bedridden) with MS (somewhere back east - NJ I think), and told by her doctors that the only way she would ever get out of bed again was in a wheelchair. Her brother in CA was having us send the HVAC CS to her. When she started moving her legs, the parents decided to try it. In the process, the mother was rid of Lyme Disease, and the father had another serious problem (sorry - I don't remember what) that he was rid of. In the end, they all went together and bought an UltraPro to continue making and taking the CS as a family.

I don't remember who "this" person was (that sent this email) but I believe she was in contact with the brother through an "MS list". Her feedback was very much appreciated! In fact, it is the only feedback I got relative to dosage. All of my feedback from the family was by phone with the brother. Last thing I heard (when they bought the UP) was that the girl was home, getting about, cooking in the kitchen (which she loved), no cane or crutches, and improving daily, although she tired quickly and had to rest allot. **I LOVE MY WORK!**

Bruce,

Just heard from that guy who's sister was sick. Well she is walking with a walker. He said she is coming along good. He is getting low on his CS supply so he will be calling you shortly. She is using about 4oz a day I think.

If I hear anymore I will let you know.

Have a wonderful day!

D.E. :")

> I too have been using CSPro silver for about 1 month now for lyme and see
> results. What machine did you buy from CSPro? I want to get one but confused
> about all the different ones they have.
> Tami M

Tami,

I just took a look at the CS PRO web site. I see they have added a couple of new machines. While having more machines to choose from is a good thing, it does complicate a purchase decision.

I went through this decision making process about a year ago so I know exactly what you are going through. I had decided to get one of the CS PRO HVAC units and had narrowed my choice to either their Ultra or the Ultra Professional.

I asked Bruce Marx if I was correct is assuming the Ultra could be considered a "standard" unit and the Ultra Pro the "heavy duty" or "industrial" version. He allowed that would be a fair characterization.

I opted to purchase the Ultra Pro as I intend to use it for many years and thought it might be the more reliable unit. The Ultra might well have been sufficient for my use but I have no regrets in having purchased the more expensive unit.

I know nothing about the newer models so can make no comment on them.

Why don't you telephone Bruce Marx at CS PRO and tell him how you intend to use CS and give him some idea of the quantities you expect to make. Bruce has always answered my questions honestly and in full. I'm certain he can make a recommendation suitable to your needs.

Michael

I just wanted to thank Bruce Marx and the staff for the great service I've gotten from CSPro. I've been on the HVAC silver for lyme disease about a month and am seeing big results. I've been buying your 16 oz bottles and decided to buy a machine from you. I had my mom call with my questions for my voice is so slurred to talk on the phone.(from lyme)

Mr. Marx answered all questions and recommended the cheaper of the units. I did order the more expensive HVAC units but appreciated not being pressured. I decided I wanted to make the same exact product that I've been buying from you since I see results from it. I belong to a silver chat room and hear nothing but praise for your HVAC machines.

You will be highly recommended-
Tami

Thanks bruce, I think your the only company nowadays that has good customer service.

Your Friend,

Scott in San Pedro

Hi:

Well, my wife wanted me to put in her two cents regarding Colloidal Silver.

I bought three pounds of chicken drumsticks, thawed but previously frozen, yesterday for dinner. When I got home, typical man that I am, I assumed that we would have them for dinner with some nice honey garlic sauce but it was an assumption I made without consulting of course.

Sooooooh... the chicken had to go into the fridge for a day. The bag had about 4-6 ounces of red liquid, blood & water & who knows what else. There are those who understand chicken factories better than I, but it's not pretty. Before I put the chicken into the fridge I poured in about two to four ounces of 28-32 ppm HVAC CS into the plastic bag and shook it all up real well blood and all - hoping against hope that the chicken wouldn't smell so bad the next day that we would have to throw it out.

Now, my wife absolutely hates opening up bags of chicken for this very reason. Today, she opened up the chicken and there was absolutely NO odour. She smelled the chicken, the bag, the paper towel she put the chicken on and couldn't find odour anywhere. She doesn't normally have the nerve to get her nose close to any of these! The drumsticks smelled better than 'real' chicken. She is thoroughly impressed and so am I. And we will enjoy our chicken dinner tonight not wondering if we're doing ourselves in or not to save the \$2.97 for the chicken.

Sincerely

I. R.

Hi,

I bought my Ultra almost two years ago and am delighted with its performance. It has been flawless. I have however had trouble with water, which I discussed with you early on.

Anyway, now that I've resolved my water problems (I bought a small distillation unit), I find that I can make incredible silver colloid.

I've attached a picture of how tall the cones can be with good water. Is this extraordinary, or are these the results that I should expect?

At what point should I replace the electrode? I've burnt down five sets of arc-bars and the electrode still seems fine. But then, I have nothing to compare it to. How long should it last?

I'll be phoning in the next couple of days to order some arc-bars and possibly an electrode.

I look forward to talking to you then.

Regards,

G. L.
Alberta, Canada

Bruce,

I just want to tell you, that your website is great. It's a wealth of valuable information! I am so impressed with your professionalism, and so glad that we found your company. We love your HVAC system, which we use to make and sell Colloidal Silver, and feel very secure in selling your "Uni-Phase 16" basic generator to our customers.

I'm giving my first Colloidal Silver presentation tomorrow to a Y2K preparedness group. I've been studying like mad, reading every word on your website, to prepare for this. All of the long talks I've had with you by phone have also been invaluable. I can't believe how much there is to learn about this subject, and realize now how little most people involved in selling CS products really know.

Thanks so much for all your hard work in developing these quality products, and for all the help you've given me in understanding the Colloidal Silver issue.

Sincerely,
P. K.

As a user of Coloidal silver I have experienced many benefits. I try to tell people I live and work with, but find most people reluctant to try it .

I do want to tell you of how I used it to treat my mother's case of Shingles. She was broken out along the nerve tract of the left hip and leg. I made wet dressings soaked with Colloidal Silver and covered the sores. Then I placed plastic wrap over the wet bandages and allowed the dressings to dry. I repeated this every day for a week. In one week her lesions were dried, there was no more pain, nor was there any residual pain.

I am a registered nurse in one of North Georgia's hospitals, and I have told this story to some of the doctors who practice there. I was met with some mild, but less than serious interest, but mostly just smiles of condescension.

Hi Dr. Marx

The CS-Pro system arrived and works rather well. The CS quality is so far superior to the low voltage DC products I was playing with before, it almost justifies the FDA action. I have three samples of CS purchased from a local health food store. One was clear and measures at 10ppm labeled as 20, one light amber measures 12ppm labeled as 25 - 35, one very dark amber from Innovative Natural Products measures 125ppm labeled as 500ppm. I tried the 10ppm concentration HVAC CS with the Omron nebulizer last night on a wicked sinus infection. We just may have something here !!!

Best

Hi Bruce

We have gone through the first phase of the flu season here and the local variety is definitely the sinus version. The flu shots were given at our plant to anyone interested...a few had bad reactions, but no protection noticeable against this strain.

The other trick I like is to keep an 8oz spray bottle handy with 10ppm CS. A few shots in the face is refreshing and keeps bacteria and viruses away from the mouth and nose. It works well as a mouth wash or quick breath freshener. Someone should do a booklet..."101 things you can do with a spray bottle of CS". Other than spraying it into an electric outlet, I haven't found anything you can't do with it; from athlete's foot to hair odor, and everything in-between.

I found that fooling around with CS and a dropper was not useful. The only way to help the sinus problem is to put about 10cc in each side (head back), pinch your nose to keep it in, and put the head down (about 30 degrees) and hold it there for about a minute. Then blow the mess out and if there was significant mucus, do it again. Repeat the procedure as soon as new mucus forms...probably 1 - 2 hours. The interval for new mucus to form should double each time. The effects are dramatic. I find few converts to this technique. Most people I spoke with have no idea how to close off the back of the throat to keep the CS from being swallowed, and really want a pill for everything wrong with their lifestyle. It's hard to be a proponent of anything when insufferable laziness abounds.

Trials with 10ppm CS and the nebulizer are very promising. The dose of the flu I got had gone to partial pneumonia when I got smart and started the full sinus flush routine. Using the neubelizer every few hours cleared up the lung infection in two days with treatments about every 4 hours. At the height of my flu episode, I hauled out a frequency generator and hand electrodes (Dr. Hulda Clark fashion). It gives you something to do while using the nebulizer. The spray bottle of CS is a good way to get the required hand conductivity for the "zapper" probes...I prefer that to using salt water. I don't know what the synergy between the two treatments is, but both are non-invasive and the "zapper" electric field may enhance the ability of CS in the blood stream to get at the virus.

Best regards

C. Mc.

> Good Doctor...

> P. C.

Greetings,

I just wanted to take a moment to let you know that I really appreciate your posting concerning the use of baking soda.

I have been making my own CS for over six years now and the worst part is that I have to tie up my kitchen for ~80 min each time i make it (lights out).

I have always used the 3 batteries method with good results except that it takes so long.

Of course this will take some testing but thank you for being so unselfish in your dissemination of knowledge.

I really hope that in my future I will be able to purchase a product from CSPro just to say thank-you in a more tangible manner.

with warmest regards

R. H.

> Using Colloidal Silver with a Nebulizer

>

> There have been many threads concerning Colloidal Silver on a number of discussion forums. Although this post is not intended to start a new thread of endless debate about Colloidal Silver, let me make just a few comments.

>

> First, to individuals who have told me that silver in the body will lead to heavy-metal poisoning, I have replied that orthopedic surgeons have for many decades been putting silver pins in broken bones and silver plates in fractured skulls.

>

> Also, to my knowledge, nobody can point to any cases in recent years of argyria (blue-gray skin) resulting from using Colloidal Silver produced by modern electrolytic methods.

>

> At any rate, Colloidal Silver is very effective for skin problems when applied topically rather than through the circulatory system. I have been told that because the pathogens that cause respiratory problems reside on the inner surfaces of the lungs, these inner surfaces must also be treated topically. This is because like the skin, these inner surfaces are exposed to the atmosphere; they are not truly "inside" the body, like the liver. To treat these inner surfaces topically with Colloidal Silver, you must inhale it from a nebulizer.

>

> A month ago, I had passed on all this information to a friend, who then began ingesting Colloidal Silver and was able to diminish, but not eradicate, his flu symptoms. The Colloidal Silver that he used was produced by 10,000 VAC electrolysis, using a Colloidal Silver generator from CS Pro Systems (lightningnet.com). The concentration was 28-32 ppm, with a particle size of 0.003-0.008 microns.

>

> On his third bout with the flu, my friend experienced the following scenario.

>

> Thursday: Pain in right side.

>

> Friday: Pain increased.

>

> Saturday: X-ray showed pneumonia; my friend was given prescriptions for pain pills and a strong antibiotic to be taken for five days.

>

> Sunday: Symptoms got worse.

>

> Monday: X-ray showed spread of pneumonia to left lung and other areas.

>

> Tuesday: Symptoms got worse; my friend was diagnosed as having viral rather than bacterial pneumonia as evidenced by his worsening condition in spite of the antibiotic, as antibiotics have no effect on viruses.

>

> Tuesday evening: Inhaled four nebulizer reservoirs of Colloidal Silver over period of four hours (c. 24 ml total).

>

> Wednesday morning: Condition vastly improved.

>

> Thursday afternoon: X-ray showed that my friend was cured.

>

> Friday: My friend said that inhaling Colloidal Silver saved his life, and
> thanked me for helping him.
>
> My friend attributes his cure to inhaling Colloidal Silver, because even
> taking a prescribed antibiotic, he got worse until shortly after he inhaled
> Colloidal Silver. It's a shame that other people who contracted viral
> pneumonia this winter and died (and there were far too many) did not know
> about inhaling Colloidal Silver.
>

Hi Bruce,

I'm still enjoying my PRO unit I bought a couple years ago.
I just wanted to say hi and let you know I have a new e-mail address.

XXXXXXXXXXXX

Have a great day and best wishes.

> Heya!
>
> Don't know if you remember me, sir. I bought your HVAC Ultra a couple of

Dr. Bruce,

My Ultra arrived this afternoon in excellent condition, you sure can
packem.

I'll try it out tonight or in the morning, I want to reread the
instructions again,
but everything seems straight forward and clear. Thank you.

L. H.
Rock Springs, Wyoming

Hi Doc,

Just got back from Sadona where my uncle Frank lives. He's the one I told you that has prostate cancer. I brought him a gallon of CS and gave him your recommendations of taking 2oz, three times a day. He is very grateful and thanks you very, very much. Its like you have been saying all along, when push-comes-to-shove, what do you do? Also, my uncle Frank was very encouraged by the fact that you have been helping, and giving hope to all those HIV people you told me about. And actually isn't that what we are doing, were selling "hope" for people, to have a better quality of life. As a matter of fact you may get a "thank you" phone call from my uncle, his name is Frank Stobinski, a good man and like yourself, a mentor to me and alot of people. Again, from my self and my family, we thank you for all you do and all the help and support you have given me, so I can in turn help other people.

Thank you and thank God for Colloidal Silver,

R. N.

Mesa, AZ

Hi there buddy,

Been a while since we last spoke. Your HVDC system is great and have had wonderful results over the past 2 years. I need to know whether you have something for me in HVAC that can be used with our local power yet, and will be of the most superior quality and longer shelf life.

Regards

T. D. (South Africa)
