

ALTERNATIVE HEALTH TECHNOLOGIES

The first technology evolved from a scientific discovery in 1990 which claimed the ability of...
“disabling all known and unknown bacteria, viruses, fungus, pathogens and parasites”.

The second, a revival of the
“pre-antibiotic” colloidal silver, already proven to be antimicrobial

Although patents have been granted following the 1990 discover

THE REASON TWO SCIENTIFIC TECHNOLOGIES HAVE BEEN TERMED “ELECTRONIC ALCHEMY”

The term “Alchemy” is a much misunderstood and maligned concept. Sir Isaac Newton, who’s discoveries regarding gravity and motion now form the cornerstone of our science, also studied Alchemy. In fact he wrote over a million words on the topic (more than on any other) and is quoted to have said towards the end *“the great ocean of truth lay undiscovered before me”.*

Alchemy’s main concern was not turning lead into gold or living forever, it was purification, attempting amongst other things to “purify” the lower elements into Noble elements.

Because in essence, these two combined technologies of both the blood electrification and ionic colloidal silver are theoretically disabling all the bacteria, viruses, fungus, pathogens and parasites within us, leaving our own bodies to expel them naturally, the term “Alchemy” seemed more than appropriate for this purification process.

A BRIEF OUTLINE OF THE TWO TECHNOLOGIES.

The first is “blood electrification” sometimes referred to as “blood cleansing”. This evolved from a scientific breakthrough reported in one journal as follows:

“In a remarkable discovery at the Albert Einstein College of Medicine NYC in 1990, it was shown that a minute current (50-100 microamperes) can alter the outer protein layer of the HIV virus in a petri dish so as to prevent its subsequent attachments to receptor sites”.

Science News, March 30th 1991, page 207.

Two gentlemen named Dr. Steven Kaali and Peter Schwolsky had discovered that **viruses were sensitive to small amounts of electricity**. Dr. Kaali envisioned a distant future where after years of research had been done, blood could be removed from the body and electrified before being replaced, akin to dialysis.

Dr. Kaali stated that the blood electrification technology was able to:

“provide electric current flow through the blood sufficient to render the bacteria, virus, parasites and/or fungus ineffective to infect or affect normally healthy cells, while maintaining the biological usefulness of the blood or other fluids”. Additionally, that electricity itself has no toxic side effects.

Following this discovery, the two men applied for a **Patent** on November 16th 1990 and were **granted it** August 18th 1992.

(American Patent No. 5139684)

A physicist name Robert C. Beck heard of this discovery and realised it was not necessary to remove the blood to pass such a small amount of electricity into it, small electrodes over arteries on the wrists could easily provide the necessary current. Funding the project entirely himself, he started his own research. He invented a device, rediscovered a substance called “Colloidal Silver”

(the 2nd of the two technologies) and established a 4 part regime which he called the "*Beck Protocol*" for a healthier life.

He then **GAVE ALL THE INFORMATION AWAY FREE OF CHARGE, SELLING ABSOLUTELY NOTHING HIMSELF**. Bob Beck had a passionate dislike for pharmaceutical companies, his **own** research had **convincd** him of the validity of the discovery, and so he began to urge people to "**Take Back Your Power**". But Beck was NOT a medical doctor and therefore could make NO medical claims. However, Beck believed if he could educate, inform, and inspire enough people to either build or buy their own devices, they would become "Health Researchers", able to assess **for themselves** whether either of these technologies could benefit them. (*Which Beck believed with true conviction they would*).

Unfortunately there was a limitation to Becks design which meant blood electrification was not suitable for those taking medications, strong herbs (such as garlic), or for those amongst us who smoke. A minor modification has resolved this issue though.

I've been researching myself for over 3 years now. I had a Beck style device designed and built to my own specifications, and have confirmed to my own satisfaction one of Becks claims: *Normal red blood cells when sealed in a microscope slide last about 4 days, whilst blood cells taken from a person who has been using blood electrification for a few months last about 30 days!* I alleviated all symptoms of my own anaemia in 7 weeks of daily use, which to me supports Becks observation. These devices can be purchased if people wish to assess the potential of the combined technologies.

However, for those wishing to experiment with only the 2nd technology, it requires very little...

IONIC COLLOIDAL SILVER.

Science has known of the antimicrobial qualities of silver for at least a century, the Ancient Greeks also knew of it's properties. **Silver kills bacteria**. The Meir Space Station used a silver system to purify it's water being both EFFECTIVE and CHEAP.

Ionic Colloidal Silver (ICS) is simply 2 rods of 99.9% pure silver immersed in distilled water with 3 or 4 nine volt batteries attached. Just basic electrolysis.

The process produces ions, tiny charged particles of silver, suspended in pure water. Since the early 1900's it has been ingested and injected, and IN THIS FORM appears harmless to humans. I state "*in this form*" because products called "Colloidal Silver" are NOT always electrically charged (which IS important), and particles bound to proteins to produce the colloid can be significantly larger...

This could POSSIBLY induce the ONLY known side effect of silver, Argyria (usually associated with silver compounds). A cosmetic condition turning skin a shade of greyish blue. The term "*Blue Blooded*" is believed to derive from Royalty using silver eating utensils, plates, and goblets which lost enough fragments of silver over their lifetimes to induce mild cases of the condition.

So WHY do people take colloidal silver? For many reasons, but mainly for it's KNOWN ability to kill bacteria (which are becoming our worst enemies), sometimes being described as a "natural antibiotic". By submitting samples of well water contaminated with E-coli bacteria to the Canadian Ministry for Health, a good friend PROVED for me that Home-made ICS was more effective at purifying the water than either domestic bleach or industrial chlorine. ICS was the ONLY one which killed **all** the bacteria! The test results are available for download from our website, along with dozens and dozens more documents in the ever growing "Resource Library" section.

Experimental use of nebulising ICS is on the increase, being the second most effect way of delivering ICS into the blood stream, and because ICS DOES kill upon contact it could be tested upon any lung infections. As a smoker I've found it can noticeably improve breathing, but I suffer no actual condition.

Another document indicates ICS prevents an immune response to poisoned Ivy, and I don't believe it coincidence that in the last 2 years I haven't suffered from one day of hay fever which has plagued me annually without fail for more than 20.

ICS cannot be patented, and the cost to those wishing to discover whether ICS can help them is only pounds (*the cost of four 9v batteries, distilled water and two strips of 99.9% pure silver*). For this reason I, and many others believe neither the electronic blood cleansing or ionic colloidal silver will EVER be funded and researched properly. Pharmaceutical companies make billions upon billions of pounds profit every year, one drug "Interferon" ALONE worth over a billion dollars a year revenue. Positive claims made for colloidal silver are being vehemently attacked by such companies, and governements are becoming involved with debateable motivation.

"*Vitamin & Nutrition*" suppliers are another story, jumping on the "colloidal silver" bandwagon and charging what I consider obscene amounts such as £17 for 75ml, the amount I use as a mouthwash twice a day, when only **£20** worth of materials will generate many **months**, if not years worth of ICS.

In the spirit of Beck, it is **important** to me to provide as much **FREE** information as possible, thus offering the opportunity for people to CHOOSE for themselves.
