THEORETICAL
BLOOD CLEANSING

VIA

BLOOD
ELECTRIFICATION

AND

IONIC COLLOIDAL
SILVER GENERATION

AN
INTRODUCTION

WHAT IS “ELECTRONIC ALCHEMY”?

The term “Alchemy” is a much misunderstood and maligned concept. Sir Isaac Newton, who’s discoveries regarding gravity and motion now form the cornerstone of our science, also studied Alchemy. In fact he wrote over a million words on the topic (more than on any other subject) and is quoted to have said upon his deathbed *“the great ocean of truth lay undiscovered before me”*.

Alchemy is NOT just about turning lead into gold or living forever, it is about PURIFICATION. Practioners were attempting amongst other things to “purify” the lower elements into Noble elements, and in addition, to purify their souls. Because in essence, the two combined technologies of both the electronic blood electrification and ionic colloidal silver are theoretically disabling all known and unknown bacteria, viruses, fungus, pathogens and parasites within us, leaving our own bodies to expel them naturally, the term “alchemy” seemed more than appropriate for this purification process.

WHAT IS “ELECTRONIC BLOOD CLEANSING”?

“In a remarkable discovery at the Albert Einstein College of Medicine NYC in 1990, it was shown that a minute current (50-100 microamperes) can alter the outer protein layer of the HIV virus in a petri dish so as to prevent its subsequent attachments to receptor sites”.

Science News, March 30th 1991, page 207.

In layman’s terms this means that the virus can’t infect healthy cells (during treatment) and would be easily flushed out via our immune systems. Although this astounding breakthrough was reported in other periodicals, sadly it seems further media coverage was suppressed. Dr Steven Kaali and Peter Schwolsky (two of the people discovering this data) took out at least two patents which describe two possible ways of utilising blood electrification, stating the technology was able to *“provide electric current flow through the blood sufficient to render the bacteria, virus, parasites and/or fungus ineffective to infect or affect normally healthy cells while maintaining the biological usefulness of the blood or other fluids”*. Their patents included one for removing the blood from the body,

treating it with electricity and re-injecting it (akin to dialysis), and another for sewing tiny electrodes and batteries underneath the skin. A total of at least 8 patents exist JUST on blood blood electrification to disable these pathogens and invaders. Dr Kaali stated that “electricity itself has NO toxic side effects”, but added that many more years of research would be needed before this technology could be used in the public domain.

A physicist named Robert Beck B.E., DSc now enters the arena. He invented, and in 1946 patented, the low-voltage electronic flash found in modern cameras. Having heard about the discovery he saw no reason for the blood to be removed from the body to receive the necessary micro-currents of electricity which would neutralise the virus. He further proposed/concurred in a public lecture in 1991 that not ONLY the HIV and Epstein Barr viruses were affected but ALL VIRUSES, BACTERIA, PATHOGENS, PARASITES AND FUNGI were also “neutralised”.

Beck discovered another effect of having these mirco-currents of electricity charging the blood, is that it increases the longevity of the red blood cells. The blood from a healthy human once sealed in a microscope slide will last approximately 4 days. Blood removed from a person using a Beck like device for 3 months will last approximately 28 days. This effect alone was proven to me when in seven weeks I relieved all symptoms of anaemia, (confirmed by blood tests but with no other medical intervention or dietary change), which I was personally suffering from.

Whilst Beck was experimenting, he discovered that his device caused blood cells to absorb abnormally high levels of substances causing, in some cases, highly unpleasant effects. He, and companies which sell Beck devices, warned people against “electroporation” and advised them not to take any medication, vitamin supplements and even garlic, coffee, nicotine and herbs around 20 hours prior to blood electrification. This obviously made it totally impractical for many seriously ill people who just hadn’t got the faith to ignore any medical advice and discard their medications which may have been helping them to some degree.

Luckily, a gentleman named Michael Forrest furthered Becks research and realised Beck had mistakenly identified this high absorption as “electroporation” which it was not. It transpired that the frequency his device ran on was the cause, at 4hz cells “transport systems” are activated whereas if the frequency was increased to 100hz the effect did not happen and NO precautions are necessary which inhibit taking medications or require dietary amendments. This is of **vital** importance. The discovery at the Albert Einstein School of Medicine showed that it was the ‘current’ not the ‘frequency’ which was disabling the body’s invaders. In simplistic terms, the current is the force or “push” whilst the frequency (in this instance) is the rate at which the electricity switches between negative and positive.

Mr. Forrest cites two companies who create electroporation devices, one of which is Cyto Pulse Sciences, who state quite clearly that 1430 volts per centimetre are required to produce this effect. NONE of the Beck like devices including the Electronic Alchemy Research Unit provide anything like this voltage, therefore any cleansing reactions are NOT caused by electroporation despite what Beck and the companies he endorses may still be claiming.

WHAT DOES BLOOD ELECTRIFICATION FEEL LIKE?

People experience the sensations of electricity differently. Most people find they feel a slight tingling, some virtually nothing at all. It is usually necessary to adjust the voltage whilst wearing the unit to ensure it remains comfortable, but at the optimum output. There are a few people who are very sensitive to electricity, but they can easily compensate for this by simply not turning the voltage up as high. The majority of people do come to find it a pleasant experience.

ARE THERE ANY SIDE EFFECTS TO BLOOD ELECTRIFICATION?

A phrase has been coined known as “Cleansing Reactions”. The process of blood electrification means your immune system has more microbial ‘die off’ to contend with, hence the necessity to drink plenty of water and ingest colloidal silver (preferably nebulised in my opinion to facilitate the transference into the blood). Infected white blood cells (immune cells) which have been weakened by infection can have their outer membrane ruptured (a process known as Lysing) which causes them to die. The actual cleansing reactions are caused directly from the blood cell lysing and one’s own immune system chemically attacking disabled viruses and bacteria. The speed and intensity of this reaction is controlled by the individual, by either shortening or lengthening the daily usage time of the Electronic Alchemy Unit. Users simply adjust the length of time they use the unit depending on how they feel the following day.

Our unit has been designed to minimise these effects, so not everyone experiences any ‘cleansing reactions’ at all. These are claimed to include headaches, stiff joints, nausea, sleepiness, weakness, spots or boils, foggy thinking and dulled speech. Personally, after having a break from using the device for a couple of months, upon starting the sessions again using it approximately 7 hours a day, after the first 7 days it only caused me to feel tired and gave me a mild headache at times. Within a few weeks however, any cleansing reactions experienced should have faded and increased energy levels should start to be felt.

What can occur from extended periods of daily blood electrification, is localised irritation of the skin around the electrodes attached to the wrists. This happens when either the cotton sleeves covering the electrodes dry out, or when the electrodes have been close to the skin using the gel. The skin may turn reddish and itchy, and in the worst cases cause slight pitting. This too can be minimised by alternating between the wrists Ulnar and Radial arteries and applying a little colloidal silver, hand cream or vitamin E cream etc. after using the device

IS IT SAFE?

The Electronic Alchemy Research Unit, when used for blood electrification as suggested, is perfectly safe. There are many other devices which use electric current on the body including T.E.N.S. units for pain relief and muscle stimulators for toning, and none of the parameters of our device are any more dangerous than those. However the device should not be used by those with an electrical implant of any sort, such as a pacemaker.

WHAT IS “COLLOIDAL SILVER”?

The properties of Silver are inspiring. The medical profession are well aware of the germicidal effects of silver, it is still used in preparations for severe burn victims where it is vital no opportunistic infections take hold. Silver itself is believed to kill over 650 bacteria, viruses and fungi, unlike antibiotics which only kill bacteria. In addition, what makes silver such an incredible substance is that strain-resistant pathogens should never evolve because silver acts directly on infected cells disabling the enzyme which they use to “breath”.

Colloidal Silver is when minute particles of silver are suspended in a solution. There are various forms of Colloidal Silver, however the ONLY one we are concerned with is the home production of Ionic Colloidal Silver (ICS) using electrolysis and distilled water. There is only one known side effect of silver when taken by humans (be it ingested or injected), a cosmetic condition known as Argyria which turns the skin a bluish grey colour. Incidentally, it is believed the term “Blue Blooded” arose from Royalty continually consuming fractions of silver over their lifetime gradually giving them Argyria. But it is IMPORTANT to note that to this date, there has been NO reported cases of Argyria caused by Ionic Colloidal Silver generated via electrolysis in distilled water with 99.9% pure silver wires or better. Since A.B. Serle wrote in 1919 *“One important advantage of using colloidal silver is that it has no recorded side effects. It also does not stain the skin, unlike certain pharmaceutical preparations of silver that do stain the skin quite strongly”* even when administered intravenously.

Although the exact concentrations of home generated ionic colloidal silver are difficult to determine, it is not the concentration of silver but the particle size and its electric charge which are important, and you can rest assured in the knowledge that whether you generate Ionic Colloidal Silver with our device or four 9v batteries, both produce particles in the .01 - .001 micron region which is considered ideal. The difference is that the colloidal silver generation section of our units is mains powered, so the constant current it supplies removes one of the variables which can cause an increase in particle size.

WHAT EXACTLY DOES COLLOIDAL SILVER DO?

Extract taken from "Colloidal Silver Facts" by Truman Berst

"The presence of Colloidal Silver near a virus, fungus, bacterium or any other single celled pathogen disables its oxygen metabolism enzyme, its chemical lung, so to say. Within a few minutes, the pathogen suffocates and dies, and is cleared out of the body by the immune, lymphatic and elimination systems. Unlike pharmaceutical antibiotics which destroy beneficial enzymes, Colloidal Silver leaves these tissue-cell enzymes intact, as they are radically different from the enzymes of primitive single-celled life. Thus Colloidal Silver is absolutely safe for humans, reptiles, plants and all multi-celled living matter. Colloidal Silver is the result of an electro-magnetic process that pulls microscopic particles from a larger piece of silver into a distilled water. These microscopic particles can more easily penetrate and travel throughout the body. Colloidal Silver works as a catalyst, disabling the enzyme that all one-celled bacteria, fungi and viruses use for their oxygen metabolism. In short, the bad guys suffocate. Unlike with antibiotics, resistant strains have never been known to develop. In fact, antibiotics are only effective against perhaps a dozen forms of bacteria and fungi, but never viruses.

Because no known disease-causing organism can live in the presence of even minute traces of the chemical element of metallic silver, Colloidal Silver is effective against more than 650 different disease causing pathogens. Since there is not enough room to list all the diseases against which Colloidal Silver has been used successfully, here is a tiny sample: acne, allergies, appendicitis, arthritis, blood parasites, bubonic plague, burns (colloidal silver is one of the few treatments that can keep severe burn patients alive), cancer, cholera, conjunctivitis, diabetes, gonorrhea, hay fever, herpes, leprosy, leukemia, lupus, lymphangitis, Lyme disease, malaria, meningitis, parasitic infections both viral and fungal, pneumonia, rheumatism, ringworm, scarlet fever, septic conditions of the eyes, ears, mouth and throat, shingles, skin cancer, staph infections, strep infections, syphilis, toxemia, trench foot, all forms of viruses, warts and stomach ulcer. In addition it also has veterinary uses, such as for canine parvo virus. You'll also find Colloidal Silver very handy in the garden since it can be used against bacterial, fungal and viral attacks on plants. Simply spray diluted Colloidal Silver on the leaves, and add to soil water.

Taken orally, the silver solution is absorbed from the mouth into the bloodstream then transported quickly to the body cells. Swishing the solution under the tongue briefly before swallowing ensures fast absorption (sublingual). In three to four days the silver will have accumulated in the tissues sufficiently for benefits to begin. Since Colloidal Silver is eliminated by the kidneys, lymph system and bowel after three weeks, a regular daily intake is recommended as a protection against dangerous pathogens. In cases of minor burns, an accumulation of Colloidal Silver can hasten healing, reducing scar tissue and infection. The lives of millions of people susceptible to chronic low-grade infections can be enhanced by this powerful preventative health measure.”

WHY HAVEN'T I HEARD ABOUT EITHER THE BLOOD ELECTRIFICATION OR IONIC COLLOIDAL SILVER?

It's actually possible these days that you HAVE heard about the colloidal silver as the reports of its successes are obviously spreading. I have now seen it sold from health stores for £17 for 58ml, which I personally find obscene as I use more than this as a mouthwash after cleaning my teeth!

That said, there will NEVER be pharmaceutical companies prepared to invest in research for one very simple reason... they can't make any money out of it. This is because they cannot take a patent out on an element (pure silver) and they can't patent the process (electrolysis). It is frightening to realise that pharmaceutical companies aren't interested in your health, on the contrary, they don't want you healthy for you would have no need of them. This seems to be the EXACT same reason Bob Becks research has been ignored.

The **POTENTIAL** for this theoretical blood cleansing following the 1990 discovery is absolutely staggering. At the end of the 1980's, had someone suggested cancer were caused by a virus they would have been ridiculed by the majority of the medical fraternity, and only ten years or so later that same medical community are preparing to VACCINATE women against cervical cancer. Other research has shown that illnesses from gallstones to alzheimer's may also be viral in nature.

So if something so simple as introducing electricity into the blood really DOES produce such astounding results, how come in the last ten years we haven't heard SOMETHING? The reason? Once more it is money. If we take an example of a single drug, Interferon, an anti cancer drug. The profit from this medication ALONE is worth over a BILLION DOLLARS A YEAR to the pharmaceutical company that hold the patent. Another example, currently the companies who hold the patents to the H.I.V. and Aids drugs are fighting tooth and nail to prevent cheap generic versions being available to third world countries, because each HIV patient is worth thousands and thousands of dollars in drugs they're prescribed.

So **IF** it was discovered that a small box worth a few hundred pounds **DID** work and made many, perhaps even most of their medications redundant losing them billions upon billions of dollars in revenue (and perhaps producing a healthier happier population in the process), would they REALLY be likely to rejoice such a medical breakthrough?

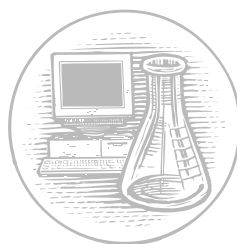

I would just like to urge people to visit our website where we have collected dozens of documents on both Blood Electrification and Ionic Colloidal Silver. No research is being invested in either of these technologies, so we must take responsibility to inform and educate ourselves as best we can with the wealth of material which IS available.

Although here at DreamWeaver we have developed an advanced and refined experimental device which performs both these functions, for those who decide they'd like to assess for themselves JUST the ionic colloidal silver you need nothing more than four 9volt batteries, distilled water and two 99.9% pure silver wires. These are actually relatively cheap, and will last for months, if not years, making gallons and gallons of ICS. Just to give you an idea, I make about 4 pints a week, and it is unlikely the majority of people will decide to drink as much as half a pint a day unless they feel like their back is "up against the wall" and are trying to fend off something serious. Even if I were purchasing distilled water it only works out around 50p a day (excluding the cost of the batteries). Our Resource Library even contains the specifications, details and schematic diagram for building the first electronic device designed by Robert Beck himself.

Although I've personally invested years of my time, and more money than I dare to think about into this project, it is more important to me to provide people with as much information as I can, which then at least offers you the opportunity and CHANCE TO CHOOSE for yourselves.
